

DANIEL MASON – BIOGRAPHY

Daniel Mason is a physicist by training from his undergrad at Cambridge, but started being more interested computer simulation of materials during his DPhil in Oxford with Adrian Sutton. He has now been at UK Atomic Energy Authority for 10 years, where he has been focussed on theory and simulation of materials for fission and fusion power. In particular, he tries to understand where the complex irradiation-induced microstructures we can now generate in the computer match experimental results, and where they do not.
